## Executive Summary

Green Audit is done to improve the environment concerned. Several campus such as IIT, IIS, etc., green audit is done. It is an official examination of the effects a college has on the environment. It helps in practices with the aim of reducing the adverse effects of these on the environment. Institutions have applied various viewpoints to preserve the environment within the institution of energy savings, recycling of waste, water use reduction, water harvesting etc. It uses the documentation of all such activities taking stock of the infrastructure of the college, their academic and managerial policies and future plans. A green auditor will study an organization's environmental effects in a systematic and documented manner and will produce an environmental audit report. A clean and healthy environment aids effective learning and provides a conducive learning environment.

Green audit can be a useful tool for a college to determine how and where they are using the most energy or water or natural resources; the college can then consider how to implement changes and make savings. It can also be used to determine the type and volume of waste which can be used for a recycling project or to improve waste minimization plan. It can create health consciousness and promote environmental awareness, values and ethics. It provides staff and students better understanding of green impact on campus. Green auditing promotes financial savings through reduction of man-made resource and its uses. It gives an opportunity for the development of ownership, personal and social responsibility for the students and teachers. Thus, it is imperative that the college evaluate its own contributions towards a sustainable future. As environmental sustainability is becoming an increasingly important issue for the region and the nation, the role of higher educational institutions in relation to environmental sustainability is more relevant.

In this Sharanabasaveshwar College of Arts, Kalaburagi the audit process involved initial interviews with the related staff to clarify policies, activities, records and the co-operation of staff and students in the implementation data for the green audit process, through the questionnaire-based survey, review of records, observation of practices and observable outcomes, in the green auditing process in the college.

The baseline data prepared for this Arts college, Kalaburagi will be a useful tool for campus greening, resource management planning of future projects, and documents for implementation of sustainable development of the college. Existing data will allow the college to compare its programs and operations with those of peer institutions, identify areas in need of improvement, and prioritize the implementation of future projects. The green audit reports assist in the process of attaining an eco friendly approach to the sustainable development of the college. Hope that the results presented in the green auditing report will serve as a guide for the educating the college community on the existing environment related practices and resource usage at the college as well as spawn new activities and innovative practices. We expect that the management will be committed to implement the green audit recommendations.

We are happy to submit this GREEN AUDIT REPORT to the authorities, The Principal of Sharanabasaveshwar College of Arts, Kalaburagi.

Place : Kalaburagi.  
Date : 15-03-2022

# GREEN UNIVERSITY

## CHAPTER 1

### Introduction

Sharanabasaveshwar College of Arts, Kalaburagi established in 1956 is now 66 years old. The college is a centre of higher learning in Kalaburagi Division with undergraduate programs. The college has played a pivotal role in the socio-economic development of the high ranges and the suburban areas of Kalaburagi region. The forefathers of the college had envisioned the delivery of quality education wedded with spiritual values to the emerging young population of the region.

The College has 11 regular faculty members in various disciplines of whom (8 Ph D. holders). In addition, the college has (6) teachers on ad-hoc basis. About 56% of the faculties are women. The total number of non-teaching staff comes to 8. The college has a total student strength of (418) of which 8.038% (52) are girls. Though the college is aided by the state government it also receives occasional funding from University Grants Commission (UGC), Department of Science and Technology (DST), Department of Bio-technology (DBT) and Karnataka State Council for Science, Technology and Environment (KSCSTE). The college regularly conducts memorial or endowment lectures on regular basis. It also organizes interdisciplinary seminars and invited talks by experts periodically at every short interval on the environmental and green protection topics, related to the integral development of student personality is taken care of by various clubs and units like National Service Scheme, National Cadet Corps, Debating Club, Quiz Club, Road Safety Club etc. The students have been consistently contributing through their outstanding performance in the University Youth Festivals, Sports, Games and intellectual pursuits. They maintain high standards in university examinations with occasional ranks and distinctions. The college gives due importance to the wholesome development of the human personality. Promote healthy staff student relationship and instill in them love and respect towards their parents and elders.

### 1.3 Total Campus Area & College Building Spread Area

Campus area 16253.73 M2

Built up area 5253.00 M2 (Three floors)

Sports wing, Outdoor stadium, Canteen, Rest rooms Library, Seminar halls. Computer labs and class Rooms

In which there is 4000 Sq Mtr is Green Canopy with botanical plants and shrubs. There is separate hostel for boys and girls, provisioned them the rooms with attached bath rooms and hot water facilities along regular medical checkups.

## CHAPTER 2.1

The green audit practically involves energy conservation, use of renewable resources, rain water harvesting, efforts of carbon sequestration methods, planting trees, waste management including hazardous and e-waste. This requires data collection and efforts for clarification of environmental policies. Green auditing includes systematic identification, recording and analysis of components related to sustainable development of an educational institution to preserve for future generations. The process has three important stages such as pre audit stage, audit stage and post audit stage. In, a training programme was conducted for students and staff to help them collect data during the audit processes. Pre- audit meeting held in the college also provided an opportunity to reinforce the scope and objectives of the audit, and discussions were held on the practicals associated with the audit. This meeting is an important prerequisite for the green audit. In the said college, meeting was conducted successfully and necessary documents were collected directly from the college before the initiation of the audit processes. Actual planning of audit processes were discussed in the pre-audit meeting. In this meeting with the help of staff and the college management.

The college authorities were ready to encourage all green activities. It was decided to promote all activities that are environment friendly such as awareness programs on environment, campus farming, planting more trees in the campus etc. after the green auditing. The management of the college was willing to formulate policies based on green auditing report.

### 2.2 Scope and Goals of Green Auditing

A clean and healthy environment aids effective learning and provides a conducive learning environment. There are various efforts around the world to address environmental education issues. Green Audit is the most efficient and ecological way to manage environmental problems. It is a kind of professional care which is the responsibility of each individual who are the part of economical, financial, social and environmental processes. It is necessary to conduct green audit in college campus because students become aware of the green audit, its advantages to save the planet and they become good citizen of our country. Thus, Green audit becomes necessary at the college level. A very simple indigenized system has been devised to monitor the environmental performance of this Sharanabasaveshwar College of Arts. It comes with a series of questions to be answered on a regular basis. This innovative scheme is user friendly and totally voluntary. The aim of this is to help the institution to set environmental examples for the community, and to educate the young learners.

### 2.3 Benefits of the Green Auditing

Empower the organizations to frame a better environmental performance. More efficient resource management

- Benchmarking for environmental protection initiatives
- To provide basis for improved sustainability
- To create a green campus
- To enable waste management through reduction of waste generation, solid- waste and water recycling
- To create plastic free campus
- Recognize the cost saving methods through waste minimizing and managing.
- Point out the prevailing and forthcoming complications.
- Authenticate conformity with the implemented laws
- Enhance the alertness for environmental guidelines and duties
- Impart environmental education through systematic environmental management approach and improving environmental standards

- \* Financial savings through a reduction in resource use
- \* Development of ownership, personal and social responsibility for the College and its environment.
- \* Enhancement of college profile Developing an environmental ethic and value systems in youngsters.
- \* Green auditing should become a valuable tool in the management and monitoring of environmental and sustainable development programs of the college.

## 2.4 Target Areas of Green Auditing

Green audit forms part of a resource management process. Although they are individual events, the real value of green audits is the fact that they are carried out, at defined intervals, and their results can illustrate improvement or change over time. Eco-campus concept mainly focuses on the efficient use of energy and water; minimize waste generation or pollution and also economic efficiency. All these indicators are assessed in process of "Green Auditing of educational institute". Eco-campus focuses on the reduction of contribution to emissions, procures a cost effective and secure supply of energy, encourages and enhances energy use conservation, promotes personal action, reduce the institute's energy and water consumption, reduce wastes to landfill, and integrate environmental considerations into all contracts and services considered to have significant environmental impacts. Target areas included in this green auditing are water, energy, waste, green campus and carbon footprint.

### Auditing for Water Management

Water auditing is a method of quantifying water flows and quality in simple or complex systems, with a view to reducing water usage and often saving money on otherwise unnecessary water use. Water is life; virtually everything we do or use each day involves water. Yet, we do not give it the importance that is due to it. India will soon be a water-stressed country and we all need to work towards our water security. There is an increasing awareness around the globe of the centrality of water to our lives. This awareness crosses political and social boundaries. In many places people have difficult access to drinking water. Often it is polluted. We need use water wisely to ensure that drinkable water is available for all, now and in the future. Water auditing is a mechanism for conserving water, which will grow in significance in the future as demand for water increases. It is conducted for the evaluation of facilities of raw water intake and determining the facilities for water treatment and reuse. The concerned auditor investigates the relevant method that can be adopted and implemented to balance the demand and supply of water. It is therefore essential that any environmentally responsible institution examine its water use practices.

### Auditing for Energy Management

An energy audit is an inspection, survey and analysis of energy flows for energy conservation in a building, institution, process or system to reduce the amount of energy input into the system without negatively affecting the output. It shows where the power consumption is more in the given system without negatively effecting the out put. It shows where the power consumption is more in the given system. It can also be called as controlling of the power usage to avoid-losses and maximize efficiency. Energy management (audit) approach is understanding energy costs, bench marking, energy performance, matching energy use to requirement, maximizing system efficiencies, optimizing the input energy requirements, and fuel and energy substitution. Energy cannot be seen, but we know it is there because we can sense its effects in the forms of heat, light and power. This indicator addresses energy consumption, energy sources, energy monitoring, lighting, appliances, and vehicles. Energy use is clearly an important aspect of campus Attainability and thus requires no explanation for its inclusion in the assessment. An old incandescent bulb uses approximately 60W to 100W while an energy efficient light emitting diode (LED) uses only less than 10 W. Energy auditing deals with the conservation and methods to reduce its consumption related to environmental degradation.

## LIST OF PLANTS SHARANABASAVESHWAR COLLEGE OF ARTS, KALABURGI

Sl No	Botanical name	Common name	Family	Number
1.	<i>Abrus precatorius</i>	Gulganji	Fabaceae	1
2.	<i>Acaena ferruginea</i>	Banni mara	Fabaceae	2
3.	<i>Acalypha hispida</i>	Poz tail	Euphorbiaceae	1
4.	<i>Adhatoda vasica</i>	Adusoge	Acanthaceae	4
5.	<i>Adenium obesum</i>	Desert rose	Apocynaceae	8
6.	<i>Aegle marmelos</i>	Bael	Rutaceae	3
7.	<i>Aerva lanata</i>	Mountain knot grass	Amaranthaceae	2
8.	<i>Albizia lebbeck</i>	Rain tree	Fabaceae	3
9.	<i>Alternanthera brasiliensis</i>	Joy weed	Amaranthaceae	30
10.	<i>Terminalia catappa</i>	Badam tree	Combretaceae	3
11.	<i>Allamanda cathartica</i>	Golden trumpet	Apoxytaceae	1
12.	<i>Aloe vera</i>	Lole sara	Liliaceae	6
13.	<i>Anthurium</i>	Tail flower	Araceae	3
14.	<i>Hymenocallis littoralis</i>	Spider lily	Amaryllidaceae	3
15.	<i>Annona squamosa</i>	Custard apple	Annonaceae	3
16.	<i>Artemisia absinthium</i>	wormwood	Asteraceae	1
17.	<i>Araucaria heterophylla</i>	Christmas tree	Araucariaceae	4
18.	<i>Artocarpus heterophyllus</i>	Jack fruit	Moraceae	1
19.	<i>Asparagus racemosus</i>	Shatavari/Tayi beru	Asparagaceae	6
20.	<i>Azadirachta indica</i>	Neem	Meliaceae	15
21.	<i>Bacopa monnieri</i>	Neerbrahmmi	Scrophulariaceae	2
22.	<i>Pogonatherum paniceum</i>	Bamboo grass	Gramineae	106
23.	<i>Basella alba</i>	Basale soppu	Basellaceae	1
24.	<i>Piper betle</i>	Betel	Piperaceae	1
25.	<i>Bougainvillea spectabilis</i>	Paper flower	Nyctaginaceae	5
26.	<i>Bryophyllum pinnatum</i>	Air plant	Cannulaceae	5
27.	<i>Butea monosperma</i>	Muttugada gida	Fabaceae	1
28.	<i>Caesalpinia pulcherrima</i>	Sankeshwar	Fabaceae	1
29.	<i>Casuarina equisetifolia</i>	Gali mara	Casuarinaceae	1
30.	<i>Catharanthus roseus</i>	Sadabahar	Apocynaceae	1
31.	<i>Ceiba pentandra</i>	Silk cotton	Malvaceae	1
32.	<i>Centella asiatica</i>	Brahmi	Apiaceae	4
33.	<i>Cestrum nocturnum</i>	Night jasmine	Solanaceae	1
34.	<i>Chrysanthemum indicum</i>	Sevantige	Asteraceae	2
35.	<i>Cissus quadrangularis</i>	Nolli gida	Vitaceae	4
36.	<i>Citrus lemon</i>	Nimbe	Rutaceae	1
37.	<i>Coleos aroamicus</i>	Dodda pathri	Lamiaceae	4
38.	<i>Cocos nucifera</i>	Coconut	Arecaceae	4
39.	<i>Commiphora wightii</i>	Guggul	Burseraceae	1
40.	<i>Costus igneus</i>	Insulin plant	costaceae	2
41.	<i>Crescentia cujete</i>	Begger's bowl	Bignoniaceae	1
42.	<i>Codiaeum variegatum</i>	Croton	Euphorbiaceae	6
43.	<i>Cymbopogon citratus</i>	Lemon grass	Poaceae	2
44.	<i>Delonix regia</i>	Gulmohar	Fabaceae	2
45.	<i>Dieffenbachia</i>	Dumb cane	Araceae	15
46.	<i>Dracaena marginata</i>	Dragon tree	Asparagaceae	15
47.	<i>Duranta repens</i>	Goldendew drop	Verbenaceae	50
48.	<i>Eclipta alba</i>	Bringraj	Asteraceae	1
49.	<i>Eucalyptus globules</i>	Nilgiri	Myrtaceae	3
50.	<i>Ervatamia divericata</i>	Chakramallige	Apocynaceae	15
51.	<i>Eugenia jambolana</i>	Nerale	Myrtaceae	2
52.	<i>Euphorbia milli</i>	Crown of thorns	Euphorbiaceae	17
53.	<i>Euphorbia pulcherrima</i>	poinsettia	Euphorbiaceae	1
54.	<i>Euphorbia tirucalli</i>	Kalli tree	Euphorbiaceae	1

110.	<i>Vitex negundo</i>	Lakki gida	Verbanaceae	2
111.	<i>Zamiculus zamifolia</i>	Zz plant	Araceae	1

te: THE REMAINING AREA OF THE COLLEGE CAMPUS IS FLOURISHED WITH BEAUTIFUL LAWNS

# Green Foundation

## AUDITING FOR GREEN CAMPUS MANAGEMENT

Green Campus is an environment which improves energy efficiency, conserving resources and enhancing environmental quality by educating for sustainability and creating healthy, living and learning environments. Green Campus rewards long term commitment to continuous environmental improvement from the campus community. Green colleges make a point to account for sustainable living when designing and operating their buildings. Many of their facilities incorporate natural lighting, improve air quality, and reduce energy and water use. Trees play an important ecological role within the urban environment, as well as support improved public health and provide aesthetic benefits to cities. Planting trees without consideration for their species location, and maintenance will not result in all of their wished-for benefits. It is essential to plan where the trees are planted and to plan their ongoing maintenance in order to maximize future benefits and to ensure long-term tree survival and growth. Trees in a college yard improve air quality and can reduce temperatures with their cool shade. They are a small environmental investment that will pay dividends for decades to come. In one year, a single mature tree will absorb up to 48 pounds of carbon dioxide from the atmosphere, and release it as oxygen. So while you are busy studying and working on earning those good grades, all the trees on campus are also working hard to make the air cleaner for us. Trees on our campus impact our mental health as well; studies have shown that trees greatly reduce stress, which a huge deal is considering that many students are under some amount of stress.

### Auditing for Carbon Footprint

Microcosms of the world at large, college campuses are great test beds for environmental change, and many students are working hard to get their administrations to take positive action. The initiatives that are emerging are models for the larger society, and the students pushing for them will be taking these lessons with them, too as they enter the work force after graduation. Foremost on the minds of green-leaning students today is global warming, and many are joining hands to persuade their colleges to update policies and streamline operations so that their campuses can become part of the solution. Commutation of stakeholders has an impact on the environment through the emission of greenhouse gases into the atmosphere consequent to burning of fossil fuels, such as petrol diesel. The most common greenhouse gases are carbon dioxide, water vapour, methane, nitrous oxide and ozone. Of all the greenhouse gases, carbon dioxide is the most prominent greenhouse gas, comprising 402 ppm of the Earth's atmosphere. The release of carbon dioxide gas into the Earth's atmosphere through human activities is commonly known as carbon emissions. The question is what should be done to reduce carbon emissions. Often the challenge lies in choosing just the right approach that will contribute most to the objective. Naturally, the results of these interventions also have to be monitored and assessed;

Many colleges want to reduce their carbon dioxide (CO<sub>2</sub>) emissions. But that's not so easy, given that a range of factors determine carbon emissions, including mobility, waste, and energy consumption. So, gaining insight into CO<sub>2</sub> emissions is extremely important.

An important aspect of doing an audit is to be able to measure your impact so that we can determine better ways to manage the impact. In addition to the water, waste, energy and biodiversity audits we can also determine what our carbon footprint is, based on the amount of carbon emissions created. One aspect is to consider the distance and method traveled between home and college every day. It undertakes the measure of bulk of carbon dioxide exhaled by the organization through which the carbon accounting is done. towards sustainable development. It is necessary to know how much the organization is contributing

# Green Foundation

## 2.5 Methodology of Green Auditing

The purpose of the audit was to ensure that the practices followed in the campus are in accordance with the Green Policy adopted by the institution. The criteria, methods and recommendations used in the audit were based on the identified risks. The methodology includes: preparation and filling up of this Sharanabasaveshwar College of Arts, a questionnaire, physical inspection of the campus, observation and review of the documents, interviewing responsible persons and data analysis, measurement and recommendations. The methodology adopted for this audit was a three step process comprising.

**1. Data Collection** - In data collection phase, exhaustive data collection as observation, survey was performed using different tools such as communicating with responsible persons and measurements. Data collection was done from the primary sources.

Following steps were taken for data collection:

- The team visited each department, labs, library, canteen, gardens, in the campus etc.
- Data on the general information was collected by observation and interview.
- The power consumption of appliances was recorded by taking an average value in some cases.
- Plants were identified using standard taxonomic books.
- Waste generated was measured directly at the source of production.

**2. Data Analysis** - Detailed analysis of data collected include: computation of energy consumption, analysis of latest electricity bill of the campus, understanding the tariff plan provided by the GESCOM the Energy supplying Company Gulbarga. Data related water usage were also analyzed using appropriate methodology.

**3. Recommendation** - On the basis of results of data analysis and observations, some steps for reducing power and water consumption were recommended proper treatment methods for waste were also suggested. The above target areas particular to the college was evaluated through questionnaire.

## Auditing for Water Management :

Use of water in the college. With sources and flow transmission and lifting to overhead tanks, with pumping motors. With specifications of motors used for pumping water. With storing capacity. Water wastages and prevention and stoppage. Rain water harvesting and conservation of water. Are some of the criteria considered while auditing of water management.

## Rain water Harvesting :

The total roof area is 56320 Sqft ie 5253 Sq Mtrs

The quantity of rain water collected through roof only and the same is harvested ie  $777 \times 5253 = 4081581$  Litres [Here 777 is average rainfall in Kalaburagi in mm 5253 Sq Mtrs is Roof Area]

## Auditing for Energy Management:

List out the ways that for use of energy in the college. Electricity, electric stove, microwave, LPG, firewood, Petrol, diesel and others are there any energy saving methods employed in specify. Type of bulbs tube used for illumination etc. in a month. Are any alternative energy sources/nonconventional energy sources employed/ installed in your college? photovoltaic cells for solar energy, windmill, energy efficient stoves, etc., How many CFL and LED bulbs has your college installed? Are considered for the auditing of energy management.

## Green Foundation

The college management installed the Solar Roof Top Photo Voltaic system power generation of capacity of 354.36 KWp synchronized with GESCOM through net Metering system. This enables the clean and green energy process. Additionally, by implementing CFL,LED bulbs for illumination with BEE Starred electrical appliances.

The reduction of CO<sub>2</sub> emission with SRTPV System is as under.

0.932 X 354.36 = 330 Kgs of CO<sub>2</sub> reduced from the emission.

[0.932 kgs is the quantity of CO<sub>2</sub> reduction in emission for 1 KWp of Solar PV system installation.]

Apart from this the Carbon dioxide Emission can be reduced by taking necessary precautions and enough awareness is mentioned throughout the year among themselves between NSS, NCC, teaching, non teaching, Canteen and the administrative staffs through the routine life style and conversations very effectively and efficiently.

### Auditing for Waste Management :

The total strength of students, teachers and non teaching staff in the college and their behavior is directly related to waste management.

The wastage may be E-waste, Hazardous waste (toxic), Solid waste, Dry leaves, Canteen waste, Liquid waste Glass, Unused equipment, Medical waste if any, Napkins, etc. The quantity of the waste generated is calculated per day basis and waste treatment system is necessary and is implemented. Composting, Recycling, Reusing, Others if any can be considered. Here the wormy compost is installed for the garden waste. Water waste is drained for gardening.

### Auditing For Green Campus Management

Some of the following issues are to be considered as :

1. The garden area in the college
2. Do students spend time in the garden?
3. List the plants in the garden, with numbers of each species.
4. Is there any plantations in your campus?
5. Use of any quantity of pesticides and fertilizers.
6. What you will do with the compost generated?
7. Is there any botanical garden in your campus?
8. Is there any fruit yielding plants in the garden or college premises?
9. What is the involvement of students in the green shelter maintenance?
10. What is the total area of the campus under tree cover?

### Auditing for Carbon Footprint :

The total strength of students, teaching and non-teaching staff in the college with ladies & gents. Number of vehicles and bicycles used by the staff and students.

The some of the issues for auditing if carbon footprint are as number of two wheelers, cars, common transportation, fuel consumption, average distance travelled, number of visitors with vehicles, number of PG cylinders used in the canteen, the transportation of vegetables and other materials to canteen, and use of any other fossil fuels in the college etc. are considered for the carbon footprint and carbon dioxide emission.

Burning of fossil fuels is the main source and cause of carbon dioxide release to the atmosphere. Carbon dioxide release for the stakeholders to reach the college is very high. It is contributing to the global warming and increasing the pace of climate change.

## Follow Up Action and Plan

Green Audits are exercises which generate considerable quantities of valuable management information. The time and effort and cost involved in this exercise is often considerable and in order to be able to justify this expenditure. It is important to ensure that the findings and recommendations of the audit are considered at the correct level within the organization and that action plans and implementation programs result from the findings.

Audit follow up is part of the wider process of continuous improvement. Without follow-up, the audit becomes an isolated event which soon becomes forgotten in the pressures of organizational priorities and the passing of time.

## Environmental Education

The following environmental education program may be implemented in the college before the next green auditing:-

- Training programs in solid waste management, liquid waste management, setting up of medicinal plant nursery, water management, vegetable cultivation, paddy cultivation, tree planting, energy management, landscape management, pollution monitoring methods, and rain water harvesting methods.
- Increase the number of display boards on environmental awareness such as save water, save electricity, no wastage of food/water, no smoking, switch off light and fan after use, plastic free campus etc.
- Activate the environmental clubs
- Set up model rainwater harvesting system, rainwater pits, vegetable garden, roof garden, etc. for providing proper training to the students. Conduct exhibition of recyclable waste products
- Implement chemical treatment system for waste water from the laboratories.

## Awareness on Carbon Consumption

- Students and Staff members may be made aware of pollution caused by use of vehicles.
- The carbon consumption awareness programs on carbon emission at individual as well as social level will help to avoid air and noise pollution in the campus due to vehicles.

## Common Recommendations

- Adopt an environmental policy for the college
- Establish a purchase policy towards environmentally friendly materials
- Introduce UGC Environmental Science course to all students
- Conduct more seminars and group discussions on Environmental Education.
- Students and staff can be permitted to solve local environmental problems
- Renovation of cooking system in the canteen to save gas
- Establish water, waste and energy management systems

## Follow Up and Action Plans

Green audits form a part of an on-going process. Innovative green initiative have to be designed and implemented every year to make the college environmentally sustainable. Follow up programs of green auditing recommendations should be done meticulously before the next audit.

## Next Audit

In order to promote continuous improvement, it is recommended to conduct the next green auditing during the year 2023.

## Transparency of Green Audit Report

Green audit report is one of the useful means of demonstrating an organization's commitment to openness and transparency, then it should feel confident enough to make its green audit reports freely available to those who request them. As a basic rule, green audit reports should be made available to all.
